

Our manufacturing facilities – almost everything has changed only the smokestack, the long-standing symbol of our factory, still rests in its place.

MOPOS Olomouc:

It's already 30 years indeed!

It is not only the Bakers Association who commemorates the 30th anniversary this year; the same jubilee happens to be celebrated also by our joint-stock company – Moravské potravinářské strojírný (or Moravian Food-Industry Machine Works), Olomouc. In all honesty, were it not for the editorial staff of the PEKAŘ CUKRÁŘ journal, we would most probably leave the event unnoticed.

This is mainly due to the fact that the current “COVID age” generally does not favour to celebrations and retrospectives. We all are to cope with urgent and hot issues, respond to (to put it mildly) “operative” governmental regulations, arrange for the company’s smooth functioning, provide for adequate working conditions of our employees and, on the top of that, fulfill all our obligations to customers. Back in the memorable year of 1991, it was quite an important moment, but it was not altogether a new company that emerged

to life on the March 26th; rather it was an economic transformation of STROJOBAL, a former state-owned machine works, to an independent joint stock company. So we may be celebrating the 30th birthday, but actually there are full 65 years of experience behind our work...

We gained independence but we also took over the responsibility for the company in a tumultuous period of the 90’s when the old had often been demolished indiscriminately and the new had been coming into

existence with great difficulties. We have passed through the typical evolution process of that time – we were forced to slim down the company structure drastically and lay off workers, get rid of inefficient subsidiaries and activities, innovate our products that suddenly found themselves competing with the production of the world’s leading manufacturers, ensure sales, fight with defaulters, upgrade outdated machinery, rationalize fragmented production program, deal with the privatization, especially the voucher one...

90’s – two bread-producing lines in Poland

Poland again, just 25 years later...

In all modesty we can proudly proclaim today that we have pulled it off successfully. Our decision to hang on to the Eastern markets in times when all others had been leaving them en masse paid off. Big contracts from Russia and other formerly communist countries helped to make our company stable. Gradually we turned our focus on industrial, high-performance continuous lines for forming, proofing and cooling a wide range of bakery products including formed and toast breads, pastry, pizza, ciabatta, pretzels and other bakery products. Our production lines are tailored to individual customers not only to fit into the specific layouts of their production halls (proofers passing through two floors are no exception) but also to meet their

specific requirements regarding form and structure of their products and varieties of slicing, pricking or dusting operations.

Bread-forming lines and other machines “made in MOPOS” have already found their happy customers not only among almost all industrial bakers in Czech Republic and Slovakia, but also in many places across Russia, Belarus, Moldova, Ukraine, Poland, Hungary, Romania, Croatia, Italy, Lithuania, Estonia, Azerbaijan, Kazakhstan, Mongolia, Korea and others.

While baking technology is the matter our heart, so to say, when speaking about MOPOS the two of our other divisions should not be omitted: malting machinery manufacture and production of steel weldments. This arrangement of forces allows us to get over the fluctuations in periods of boom and recession in separate fields. As one of our Lithuanian business partners once used to say: a three-legged support is always the surest...

It behooves us to give sincere thanks for our tricenary successes not only to our customers and business partners, but primarily to all MOPOS employees: our well-coordinated team has always follow-

We greatly appreciate the recognition

Jan Kubáček, MSc

ed through with every single order from the initial concept supplied by customers to detailed construction design, manufacture and supply of equipment ending with its assembly, commissioning and putting into regular operation in bakeries in our homeland or worldwide.

our own powers, we continue manufacturing and innovating, we have stable personal and economic base to survive even the present difficulties. We are looking forward to further cooperation with current and new partners as well as fresh technical challenges in bakers' trade!

We enter the following years with sober optimism and self-confidence. We rely on

Jan Kubáček, MSc
Chairman of the Board
